

Au-di-ol-o-gists: Audiologists are the primary health-care professionals who evaluate, diagnose, treat, and manage hearing loss and balance disorders in adults and children.

Audiologists:

- evaluate and diagnose hearing loss and vestibular (balance) disorders
- prescribe, fit, and dispense hearing aids and hearing assistance technologies
- are members of cochlear implant teams
- perform ear- or hearing-related surgical monitoring
- design and implement hearing conservation programs
- design and implement newborn hearing screening programs
- provide hearing rehabilitation training such as auditory training and listening skills improvement
- assess and treat individuals, especially children, with central auditory processing disorders
- assess and treat individuals with tinnitus (noise in the ear, such as ringing)

What Does West Coast Hearing and Balance Center Offer You and Your Patients?

West Coast Hearing & Balance Center, is a group of highly trained Audiologists and support staff dedicated to exceeding customer expectations by providing the highest quality service to our patients, their families, their doctors, and the community. Our Audiologists are university trained with either a Masters or Doctorate degree in Audiology, a minimum of 7-8 years of university coursework and training.

We are committed to helping each patient manage their hearing loss for optimal communication with family and friends by providing resources to minimize the negative consequences of hearing loss. We are also firm believers in appropriate medical management of hearing loss. When a patient needs medical intervention, we discuss these needs with the patient and their family physician and/or ENT physician. Most patients can obtain substantial benefit from *properly fit* hearing aids. The key to success is the expertise of our Audiologists who will choose and program the circuitry, address the motivational concerns of the patient, and appropriately counsel regarding realistic expectations. We work with each patient to achieve a comfortable fit, a positive listening experience, and successful hearing device use.
